SKILLS

Systems & Virtualization

Linux server administration (Ubuntu/Debian) - Windows Server & Active Directory - Docker (production) - Kubernetes (fundamentals) - VMware / VirtualBox

Networking & Security

TCP/IP - Routing & switching - Firewall configuration - WAF / ADC concepts - Cisco Packet Tracer / CCNA fundamentals - Network troubleshooting

Storage, Backup & Cryptography

RAID configurations - Backup & recovery strategies - AES-256-GCM - Argon2id - Envelope encryption - HMAC-based indexing

Cloud, Databases & Programming

AWS (S3) - Git - CI/CD - PostgreSQL - MySQL - Supabase - Dart / Flutter - Java - PHP - JavaScript - Python - C++ - IoT / Arduino - PCB design - 3D design (AutoCAD, Tinkercad)

Yazid AITALLALA

Systems Administrator | Full-Stack Developer

IT professional with an Information Systems Engineering degree and over four years of hands-on full-stack experience, now moving into systems administration.

Academic grounding in Windows Server, Active Directory and networking (Cisco Packet Tracer / CCNA), plus production experience running Linux servers, Docker and AWS for a multi-tenant SaaS platform — including its encryption architecture and data protection compliance.

EXPERIENCE

Freelancer

Lead Developer & Founder
2023 - present

- Architected and operate the backend infrastructure for Sweekly.com (MySaaS), a multi-tenant e-commerce SaaS platform: PostgreSQL administration, AWS S3 storage and Linux/Docker deployment.
- Designed and implemented an enterprise-grade encryption architecture (AES-256-GCM, Argon2id, envelope encryption, blind HMAC indexing) protecting multi-tenant customer data.
- Managed data protection compliance under Algerian law (loi 25-11) and ANPDP requirements, including a local PII hosting architecture.
- Handled end-to-end technical operations: server deployment, monitoring and release management.

Mobile applications developer

D-Soft Solutions. Béjaïa, Algeria.
May 2021 — April 2023

- Built and maintained cross-platform POS applications (Flutter, Java) with integrated database and inventory systems.
- Designed custom IoT devices with proprietary PCB circuits and 3D-printed enclosures: hands-on embedded and hardware experience.
- Developed full-stack e-commerce websites and internal supplier evaluation platforms.

Intern

Sonatrach refinery. Algiers, Algeria.
January 2019 - June 2019

- Designed and implemented a full-stack web application to evaluate enterprise supplier performance within a large industrial IT environment.

Education

Bachelor's degree in Information Systems Engineering

Algiers University 1, Algiers, Algeria.
2019

Relevant coursework: Windows Server Administration, Active Directory, Computer Networks (Cisco Packet Tracer / CCNA fundamentals), Network Security & Cryptography, Database Systems.

High School Diploma in Experimental Sciences

Ahmed Zabana High School, Algiers, Algeria.
2015

PERSONAL PROJECTS

Swekly SaaS

Project type : Multi-Tenant SaaS
E-commerce Ecosystem

Description :

A multi-tenant e-commerce platform built for the Algerian market, with fully isolated store environments per retailer, a centralized administrative suite and an encrypted tenant-data architecture. The backend runs on PostgreSQL with AWS S3 object storage and Linux/Docker-based deployment; the storefront engine uses server-side rendering for SEO and carries localized delivery integrations and multi-language support. Customer data is protected with AES-256-GCM envelope encryption and blind HMAC indexing.

Used Technologies :

Nuxt 3, Vue 3, Express, Prisma ORM, PostgreSQL, AWS S3, Docker, REST APIs.

Project QR code :

NexSync POS

Project type : Cross-Platform Application

Description :

Advanced point-of-sale system with comprehensive inventory management capabilities. Features include real-time sales tracking, automated inventory control, and AI-powered stock forecasting. The application supports both desktop and mobile.

Used Technologies :

Flutter, Dart, Provider, Socket.io, SQLite, MySQL, Firebase, Tensorflow.

Project QR code :

Nokhba Store

Project type : Full-Stack E-commerce
Ecosystem

Description :

A comprehensive e-commerce platform developed for **مكتبة النخبة**, featuring a public-facing storefront and a secure, role-based admin panel. The system centralizes inventory, order processing, and customer data into a single source of truth. It includes a streamlined media pipeline for product imagery and real-time synchronization between the storefront and the administrative suite to ensure data consistency across the platform.

Used Technologies :

Vue 3, Vite, Supabase (Auth, Database, Storage), REST APIs, Tailwind CSS, Pinia

Matima App

Project type : Mobile Application

Description :

Simplified smartphone interface designed specifically for elderly users with limited tech experience. Features include streamlined calling functionality, contact shortcuts, medication reminders.. The intuitive design eliminates complexity while maintaining tessential smartphone functionality to help seniors stay connected with family and friends.

Used Technologies :

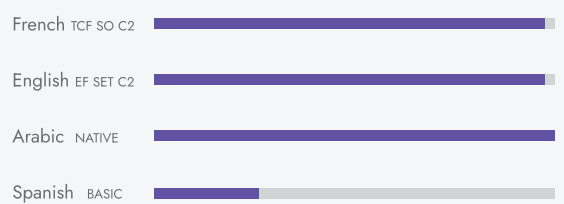

Flutter, Dart, Provider, Text-to-Speech APIS.
